

Urban Tree Inventory Of Torrington, Connecticut

Surveyor

Chris Aldrich

In Association with

Certified Zoning & Inlands Wetland Officer

Kim Barbieri

(Map, Pictures, and Data Sheet Found on Attached Disk)

File Location: C:\Users\pzwetlands\Desktop

On Computer: pzw906

Purpose:

- Determine general condition of trees
- Give an idea of what trees are found in the area and in what numbers to better plan for future landscaping projects
- Outline appropriate pest and disease prevention and treatment
- Organize and prioritize labor

Procedure: Trees were identified, measured, and photographed with a GPS camera. Then they were given a tree number specific to each tree, a location number, a condition grade, and planting location. Then certain conditions were noted as well as maintenance needs when necessary. Comments were also made on characteristics of certain trees and their surroundings. Below is a more detailed directory of the criteria of the columns found on the data sheet.

Tree Information:

Tree #- a number given to each tree in order of identification.

Location #- the first three digits are map numbers, the second three are the block numbers, and the last three are the lot numbers that the tree is located on.

Code- a two letter code assigned to each species of tree. This can be found of the species list.

DBH (Diameter at Breast Height)- this is a measurement of the diameter of the tree at 4½ feet from the base of the tree.

Tree Condition:

G (Good Condition) -are healthy trees lacking signs of disease, insect infestation or damage, and have little to no maintenance needs.

F (Fair Condition)-are trees that show some signs of disease, insect damage, or physiological problems and may need some maintenance but are not in a state of decline.

P (Poor Condition)-are trees that are in decline and show serious signs of disease, insect infestation or damage, and have serious physiological problems.

D (Dead)-are trees that are either completely dead or will be very soon.

C (Consult)-the health and safety of these trees has to be further determined by a Certified Arborist.

Planting Location:

Swlk (Sidewalk)- trees that have been planted in impervious materials such as asphalt or cement at or near to its base.

<3'- trees with planters that are less than three feet wide.

>3'- trees with planters that are over three feet wide.

Lwn (Lawn)- trees planted in lawn areas.

Conditions:

Weak Fork- trees that have a branch union that comes together at a narrow angle and contains included bark.

Over. Wires (Overhead Wires)- trees that have utility wires in direct relation to them.

Dead wood- trees with branches that are over two inches in diameter and are dead or dying, which are a risk to either pedestrians or the tree itself.

Cav. (Cavity)- an opening in a tree that is either hollow or has dead wood inside it.

Maintenance needs:

Clean- a tree in need of cleaning or pruning because of dead wood or for the health of the tree.

Raise- a tree t. Braches should be 8 feet over a side walk and 18 feet over a road.

Red. (Reduce)- a tree with a crown that needs to be made smaller

Rem. (Remove)- a tree that needs to be removed

Comments: An area where interesting finding or observations can be notes.
