**Drive Forward**

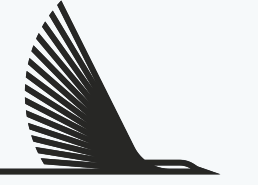

## Volta

We set out to accelerate the arrival of EV charging.

We built the most utilized EV charging network in the US – offering free and subsidized charging to drivers wherever they like to be.

Our stations double as a content platform that increases the value of real estate and tax revenue for the community by engaging new audiences and telling high impact stories using sustainable technology.

# Volta's Value to the Community

## Harnessing the Power of Free

Volta's stations are the highest utilized, averaging 5 charging sessions per day, for 1:33 hours on average per session, offsetting 19,000 lbs of CO2 per station per year.

## The Platform

The messaging capability built into each of our stations allows us to serve local business and community messaging, as well as national brands with our advanced marketing tools.

## Data Driven Approach

We shape commerce by putting the right infrastructure in the right location, increasing tax revenue for the community. Volta invests in installation and maintenance of our network, and uses machine learning to predict charging needs.

# Volta Invests in our Sites

Volta owns and operates the stations we install. After the stations are turned on, our field team regularly services the stations to keep them online and in perfect condition.

## Commitment to excellence

- Turn-key installation from site evaluation and permitting to engineering and final inspection
- Networked cloud connection
- On-going Volta Operations and Maintenance
- 24x7 Driver customer support
